

SOURAV MANNA

souravmanna41860@gmail.com | +919883316279 | [linkedin.com/in/smanna123](https://www.linkedin.com/in/smanna123) | github.com/chilling-pandas

SKILLS

Languages & Frameworks: C, C++, Python, Django(DRF), FastAPI, HTML

AI/ML & Data: Machine Learning, RAG, Semantic Search, sentence-transformers, NumPy, pandas, scikit-learn

Databases & Tools: SQL, PostgreSQL, FAISS(Vector DB), Git, GitHub Actions, AWS, Docker, Streamlit, Render.

INTERNSHIP

Intern, Think Again Lab

07/2024 – 12/2024 | Kolkata

- Implemented **JWT**-based authentication with secure login/signup flows, supporting **500+ active users** and cutting session errors by 30%.
- Integrated real-time map services using the **OSM API** and synced data in real time via Firebase (Auth, **Firestore**, Realtime DB) across 1,000+ concurrent users.
- Developed and shipped web applications using **Django**, contributing **3,200+ lines of code** and resolving **15+ critical bugs** to deliver a consistent, responsive user experience.

Tech Stack: Python, Django, Firebase, REST APIs, OSM API, HTML, MVT

ML Intern, Unified Mentor Jobs

01/2026 – 07/2026 | Noida

- Preprocessed a customer dataset of **~9,000** records for churn prediction — handling missing values and applying **one-hot encoding** to categorical features to prepare a clean training dataset.
- Trained a **Random Forest classifier** on the processed data to predict customer churn, evaluating performance to identify key churn-driving factors for business decision-making.

PROJECTS

[Smartlogix-AI](#) | [Live Demo](#)

AI-powered logistics system predicting product demand and shipment ETA for smarter supply chain decisions.

- Built **REST APIs** using **FastAPI** for demand prediction and ETA estimation, with structured request validation, **SQLAlchemy ORM** for **PostgreSQL**-based prediction traceability, and CI configured via GitHub Actions.
- Trained a **logistic regression** model for demand-level classification and benchmarked multiple regressors for ETA estimation, selecting **XGBoost** as the best performer (**R^2 0.76, MAE 1.195**).
- Containerized the application with **Docker**, configured **CI** via **GitHub Actions**, and deployed it live on **AWS EC2** behind an **Nginx** reverse proxy, with a Streamlit dashboard for real-time analytics.

Tech Stack: Python, FastAPI, Nginx, XGBoost, PostgreSQL, Docker, GitHub Actions, Streamlit, Matplotlib

[RAGnosis](#) | [Github](#)

RAG-based AI learning tool generating quiz questions and summaries from PDFs using semantic search.

- Implemented a retrieval pipeline using **FAISS** and **Hugging Face's sentence-transformers** to fetch relevant content from documents.
- PDF-to-vector pipeline by splitting documents into **500**-character chunks, generating **embeddings**, and indexing them in **FAISS** to support **semantic retrieval** for topic summarization and quiz generation.
- Wired up a locally hosted **LLM (Qwen via Ollama)** to generate structured questions with different **3**-difficulty levels and concise summaries.
- Built a **FastAPI** backend with request validation, paired with a **Streamlit** UI for real-time answer validation and scoring.

EDUCATION

The Neotia University

2022 – 2026 | India

- Bachelor of Technology in Computer Science and Engineering | CGPA - **8.35**

CERTIFICATION & ACHIEVEMENTS

[Oracle Certified Foundations Associate\(Certificate\)](#)

- Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate.

NASA Space Apps Challenge Hackathon

- Proposed a 6-month roadmap for a weather prediction system using historical NASA datasets.

Completed Exploring SAP Cloud ERP (Beginner Level)

CODING PLATFORM

- Completed **100+ DSA** problems on **LeetCode** and **GeeksforGeeks**.
